

Quick Tip: Locating Tires in the Parts List

When you need to quickly find in-stock tires in the Item List, do the following:

1. Go to the Item List in whichever way you normally do e.g. 'Main Menu', 'Parts Sales', 'Items', then press F5 to bring up the Item List screen:

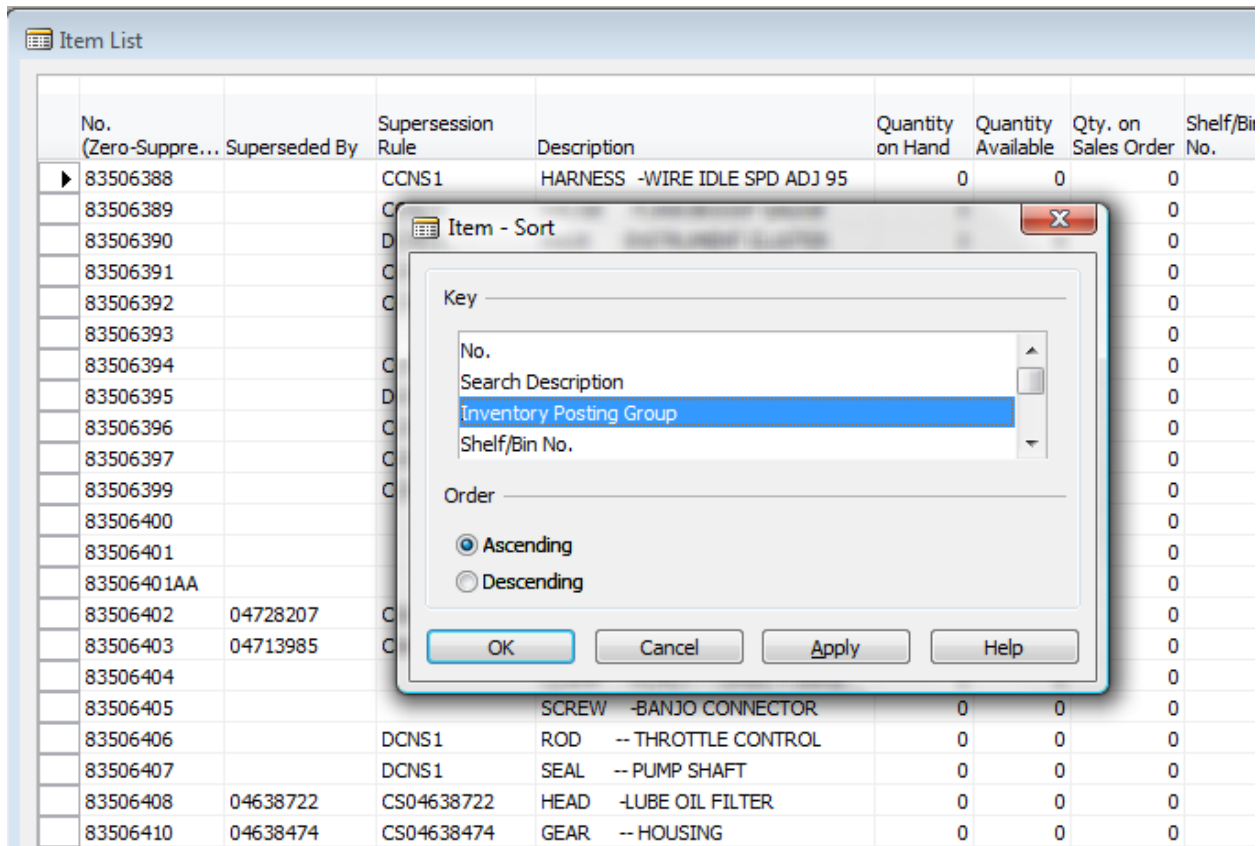

2. Press the 'Sort' button on the Toolbar (or press Shift+F8):

3. Select 'Inventory Posting Group' as the sort key and click 'OK':

This will sort Parts by their so-called 'Inventory Posting Group' and there is a unique one for tires called, unsurprisingly, 'TIRES'.

4. To set a filter to only view tires: Press Ctrl+F7 to bring up the Table Filter screen:

Add the 'Inventory Posting Group' line to the list of filtered lines on the left, and enter 'TIRES' in the filter line on the right, as shown below:

NOTE: Leave the 'Item Type <>Vehicle' line **as is**. It is used by the system to separate parts from vehicles.

After clicking 'OK' you should now see a list containing only tires:

- To set a filter to see only tires in stock, add the following filter line to the existing filter lines:

This yields only tires with a quantity on hand of greater than '0' i.e. in-stock tires:

6. To see only tires with a particular width, sidewall profile or rim size, try using individual or combinations of the following filters:

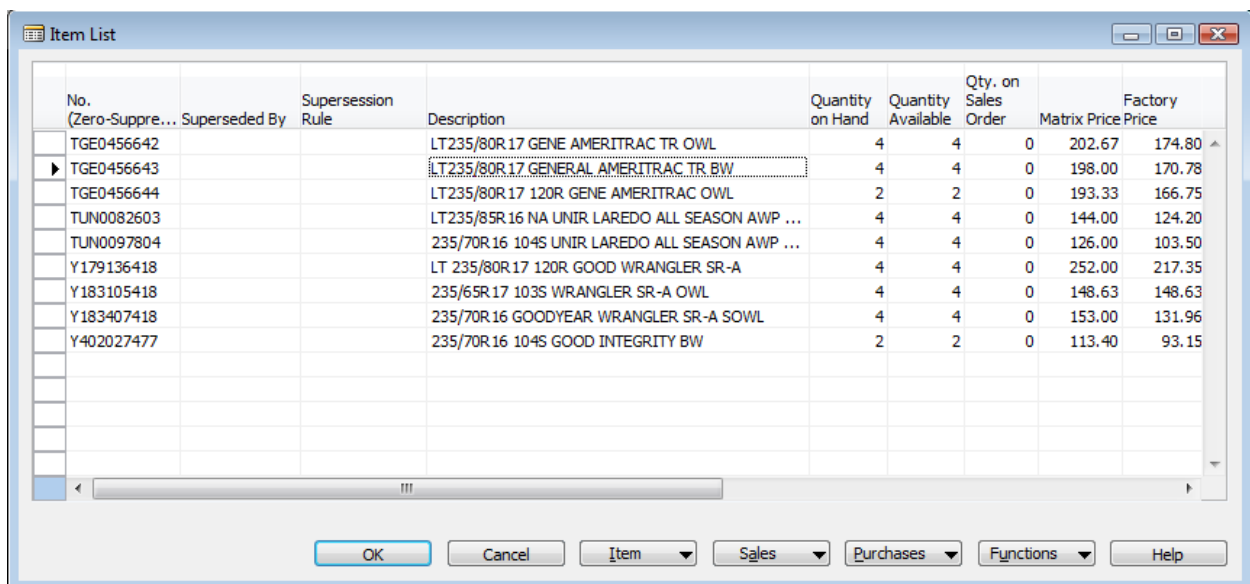

NOTE: Some part descriptions for tires from certain vehicle manufacturers are not very meaningful e.g. contain the word 'NONE' or simply 'TIRE'. You should change the descriptions for these tires to something more useful.

Getting More Out Of MPK

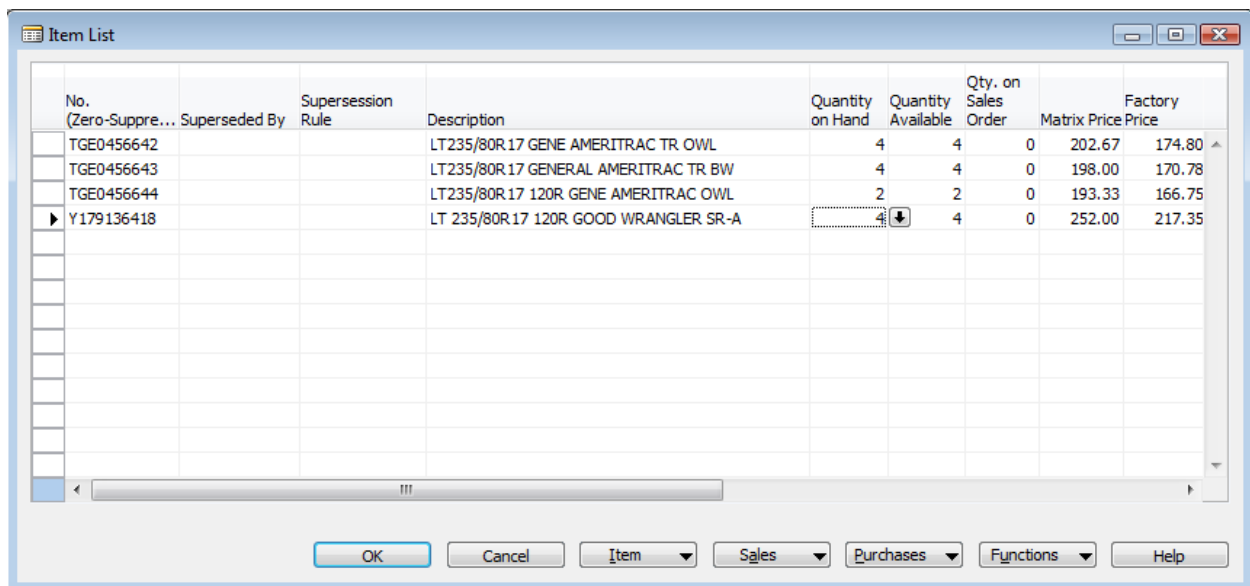

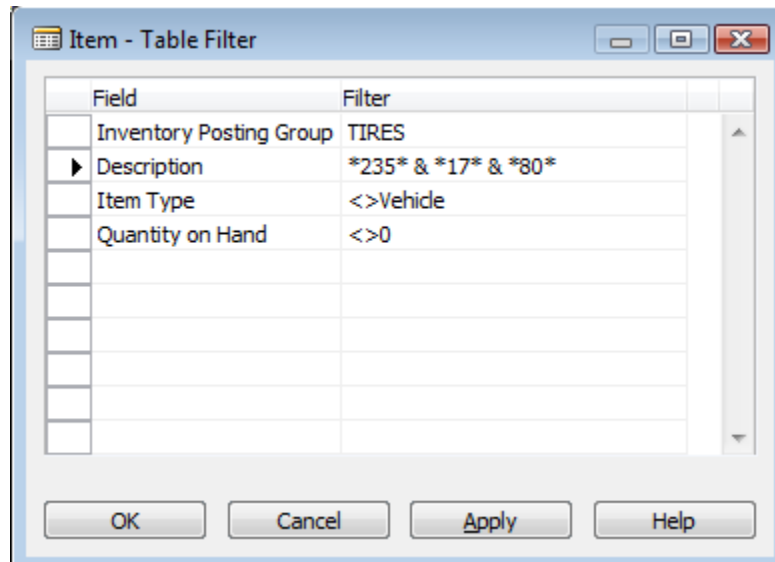

The above filter should show only tires with a width of 235 millimeters when you clock 'OK', as shown below:

The following filter will return tires with a width of 235 millimeters, a sidewall of 80, for a 17-inch rim:

Try different combinations of filters and searches to see what works best for you.
